João Santos

software_engineer --frontend --product

joao.mirasan@hotmail.com linkedin.com/in/joaosantos45 github.com/joaoxyxo Aveiro, Portugal · remote

Frontend engineer since **2018**, specialised in **Vue.js** and **TypeScript**. I joined Polarize Poker as a **junior developer** in 2020 and have led its **dev team** since 2025: I plan the roadmap, set priorities and stay hands-on from UX to deployment. Quick to pick up whatever a problem needs; I use AI tools daily to go faster without lowering the bar on tests and maintainability.

// experience

Team Lead, Frontend & Product

2025 → now

polarizepoker · remote, PT

> Lead the dev team: plan the roadmap, break work down, set priorities and review code.
> Still hands-on: own the product suite end to end, from requirements and UX to **Vue 3**, **Supabase**, CI and deployment.
> Built **shared authentication** across the suite, with one sign-in carried between apps on different subdomains.
> Replaced legacy **WordPress**, **Vue 2** and **PHP** tools with Vue 3 + Supabase apps; video via **AWS S3 + CloudFront**.
> Built a read-only **MCP server** so admins can query every product's data in plain language via Claude.
> Test and ship with **Vitest**, **Playwright** and **GitHub Actions**; deploy on **Vercel**, **Docker** and self-hosted VPS.

```
→ ~/polarize ls products/ # built since 2020
├─ rail-tracker      performance-analysis platform for professional poker players
├─ rail-live         companion product for live poker events
├─ applications      public application form with a 3-stage review back-office
├─ schoolarize       video platform for the team's training content
├─ polarize-site     new public website on Nuxt, 500+ articles prerendered
├─ polarize-hub      MCP server: natural-language questions over product data
├─ ctms              Node service syncing tournament results from SharkScope   co-built
└─ player-stats      statistics sheet for player performance                   [in dev]
```

Frontend Developer

2020 → 2025

polarizepoker · joined as junior

> Built the first internal tools in **Vue** and grew into owning whole products, from planning to production.

Frontend Developer

2018 → 2020

youclap

> Built **React** components and hooks, **Firebase** serverless functions and, with the team, the internal CMS frontend.

// side projects
